

DISCOVERY WORKSHOPS - KEY STAGE THREE

We offer practical, curriculum-linked, in-depth workshops that encourage students to work scientifically as they explore the world around them. These hands-on sessions are brought to life with activities inside and outside the classroom relating to the natural world. Functional skills are embedded throughout all our workshops.

Detailed below are the exciting range of workshop sessions that we offer Key Stage 3 students. All workshops last 1 hour 30 minutes.

Design a Rollercoaster

Roll up, roll up! Have you ever wondered how rollercoasters work and why they are so thrilling? Join us to take on the role of a roller coaster designer; learn about the science behind the rides and design your very own.

Enclosures and Enrichment

Zoos and safari parks have a duty of care to provide species with a safe and stimulating environment where they can exhibit their natural behaviours. Animal enclosures are designed to represent species' natural habitats and to provide an immersive experience for guests. Join us to discover how this is achieved and have the chance to design an enclosure and enrichment for our animals.

Science in Practice

Practical science skills are essential for many careers, whether within the scientific industry or not. Asking questions about the world, logical planning of an investigation, fair testing and interpreting results are key skills that are often difficult to embed in school. Within our Science in Practice Workshop, students will have the chance to take part in a practical science investigation and to understand how to work scientifically.

Conservation at Home

It isn't just foreign species that are endangered and in need of protecting; many British species are also under threat. Some British habitats and species are of international importance and it is vital they are cared for and protected. This interactive workshop aims to raise awareness of the plight of native species and inspire young people to act proactively in the defence of our British wildlife.

Conservation Around the World

Rothschild giraffe, African wild dogs and Sumatran tigers are just some of the endangered animals WMSP cares for that are threatened with extinction in the wild. Learn about the positive and negative relationships that humans have with animals around the world as we explore the reasons why animals are endangered. Become inspired to be a proactive force in preserving our planet and animals for future generations!

If you would like to book a session please call
